Question Answer Citation

Critique

The evidence does not support the claim 'hosting party'. Speaker 3 has been seeking confirmation. The slightly disheartened or sad tone fits this context of seeking validation, not a disappointment about a party. Furthermore, the 'hosting party' idea is not mentioned in the evidence.

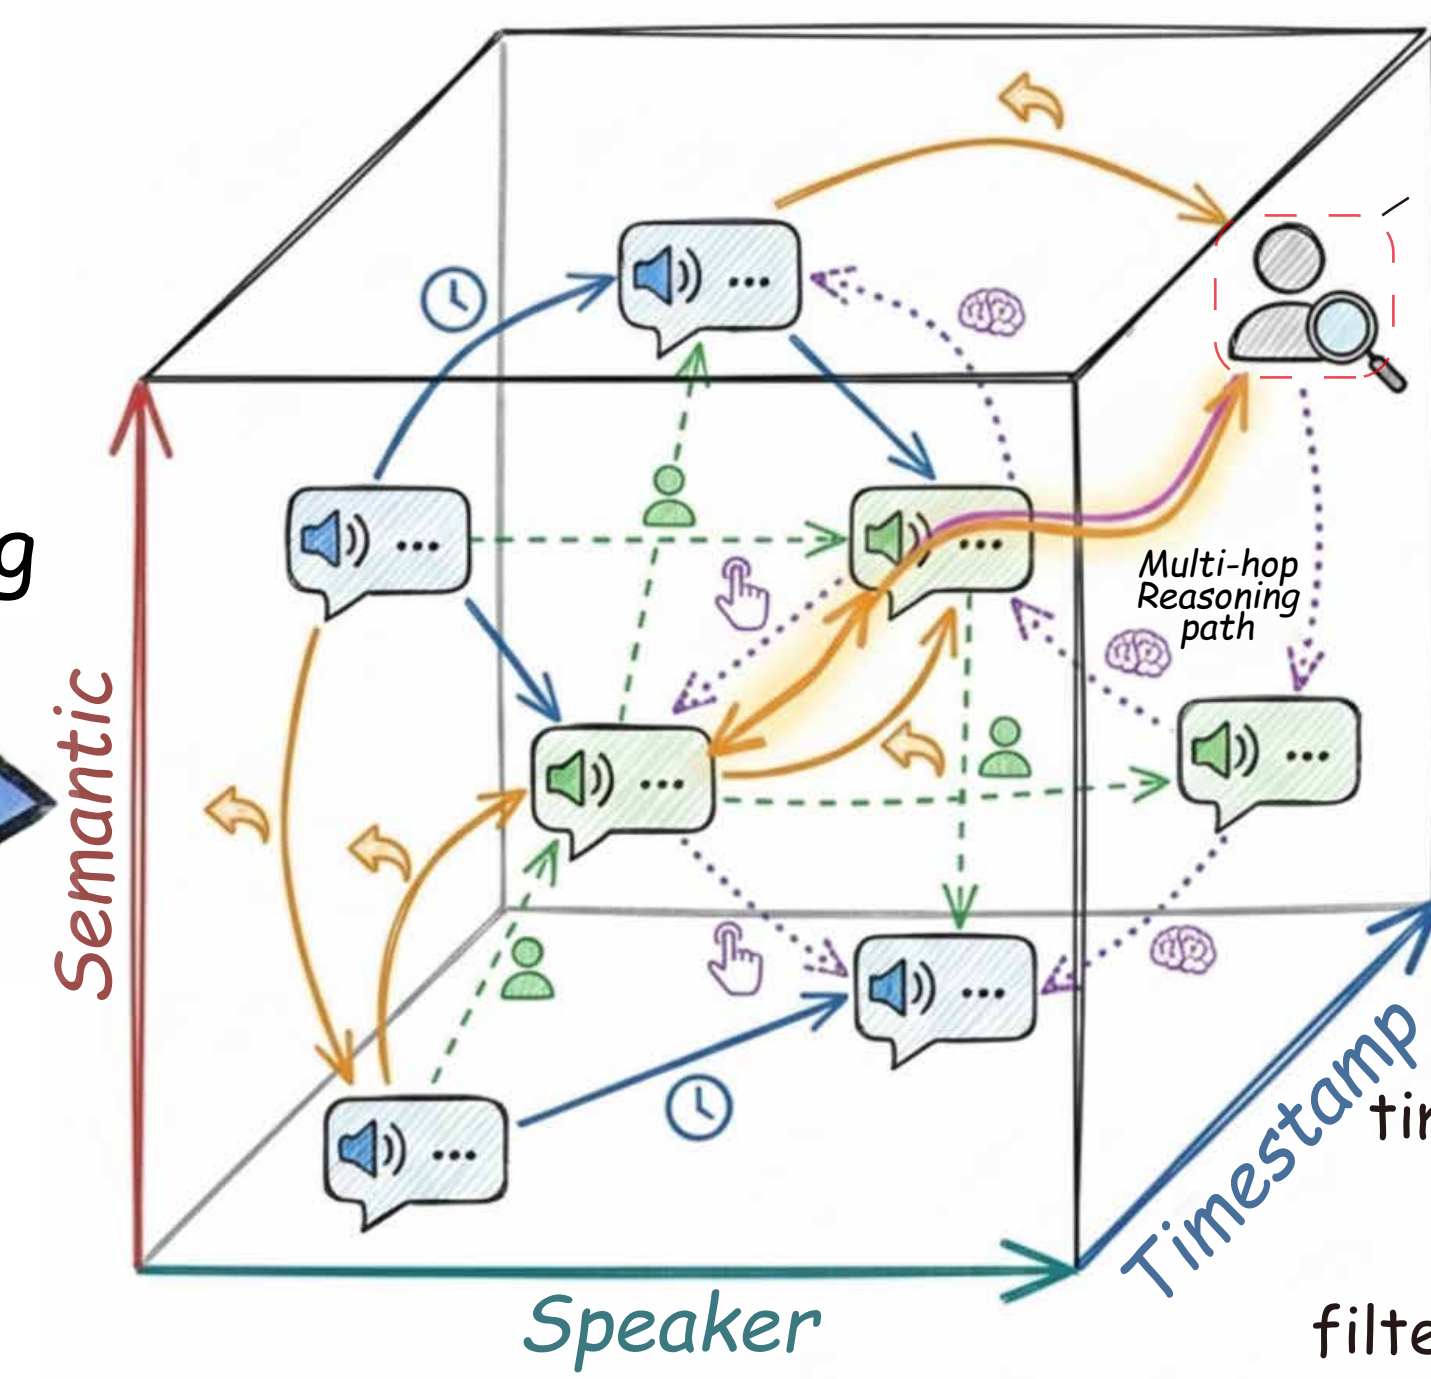

Answer

Speaker 3 were asking another participant to confirm if a proposed 'hosting party' had worked out. The sad emotion arises when the other participant gives the non-committal response "not a lot" [convEN2002a_utt12], causing Speaker 3 to realize their plan has failed and they will not be able to have the hosting party.
